INSTRUCTION TO BIDDERS

INSTRUCTIONS TO BIDDERS

Mayflower Park Sanitary Sewer Improvement Project,
located at 4980 Colorado River Road, Blythe, CA 92225.

Summary of Project - Mayflower Park is located at 4980 Colorado River Road in an unincorporated area of Riverside County 6 miles northeast of Blythe, California along the Colorado River. There is a small neighboring residential community along Colorado River Road located immediately south of the park and north of Sixth Avenue. Mayflower Park is comprised of approximately 83 acres, of which a total of 24 acres has been developed.

There are currently 152 recreation vehicle (R.V.) spaces and 27 tent camping spaces at Mayflower Park. There are restroom, shower facilities and a dump station at the Park. The R.V. spaces currently direct wastewater to the dump station. The wastewater from the dump station, restroom and shower facilities is directed to a septic tank and drain field located within the Park area. The purpose of the Mayflower Park Sanitary Sewer Improvement Project (Project) is to construct a gravity sanitary sewer pipeline system, sanitary sewer pump station and sanitary sewer force main to collect the Mayflower Park facility wastewater. The wastewater will be directed to an existing City of Blythe 8-inch diameter sanitary sewer force main located along Sixth Avenue. Ultimately, the wastewater will be conveyed to the City of Blythe Wastewater Treatment Facility. The existing Mayflower Park septic tank and drain field will be abandoned and decommissioned in accordance with County of Riverside Health Department requirements. The abandonment and decommissioning of the septic tank and drain field is included within the Project scope of work.

The Project includes the installation of 1,668 lineal feet of 8-inch diameter SDR 35 PVC gravity sanitary sewer pipeline and 10 manholes. The majority of the gravity sanitary sewer pipeline is between 6 to 10 feet below finish grade. Sewer laterals extending from the dump station and restroom and shower facilities will be connected to the 8-inch diameter SDR 35 PVC gravity sanitary sewer pipeline.

The 8-inch gravity sewer pipeline collection system will direct wastewater to an 8-foot diameter, 20-foot deep pre-cast concrete wet well. A 150 gallon per minute, 10 horsepower duplex, self-priming above-grade pump station will convey the wastewater through a 4- inch diameter, 3,049 lineal foot force main to an existing City of Blythe 8-inch wastewater force main located along Sixth Avenue. Electrical power will be directed from existing Mayflower Park electrical facilities to energize the wastewater pump station. A 2-inch water service will be extended from the existing Mayflower Park irrigation system to the pump station to provide wash down water. A local visual/audible alarm will be provided at the pump station for pump failure and high water alarm functions; however, accommodations to transmit the alarm functions to an outside location (such as the City of Blythe Public Works Department or Wastewater Treatment Plant) will not be provided unless the alterative bid item for this work is awarded. A light pole and luminaire will be provided at the pump station site for nighttime operation and maintenance purposes. A class 2 base entrance road and maintenance area will surround the above-grade self-priming pump station. A 12-inch diameter, SDR 35 PVC gravity pipeline will be extended for a distance of 40 feet from the wet well to serve the 59 acres of undeveloped Park area in the future.

The new Mayflower Park 4-inch wastewater force main will connect to an existing 8- inch wastewater force main at Sixth Avenue. The existing eight 8-inch wastewater force main currently conveys wastewater from the Hidden Beaches pump station to the City of Blythe collection system/wastewater

treatment plant. The pressure within the existing 8-inch wastewater force main along Sixth Avenue at the point of connection to the new 4-inch force main is approximately 40 psi. The Mayflower Park pump station will be much smaller than the Hidden Beaches pump station and will operate at a lower pressure than the Hidden Beaches pump station. In order to avoid a hydraulic problem along the 4-inch and 6-inch force mains in the event both pump stations are active, the Mayflower Park pump station will be “locked out” and not be allowed to operate in the event the Hidden Beaches Pump Station is active. Check valves at the Mayflower Park pump station will prohibit backflow from the 8-inch and 4-inch wastewater force mains into the pump station.

There will be two (2) air relief valve assemblies located along the 4-inch wastewater force main for air release at “high points”. There will be several “clean-outs” located along the 4-inch force main for operation and maintenance purposes. There will be a 4-inch valve located along the 4-inch force main immediately upstream of the 8-inch force main connection point to allow for the isolation of the 4- inch force main for operation and maintenance purposes. The 4- inch force main is to be located within a 10 foot wide easement. The easement is to be acquired by the County of Riverside prior to the construction of the force main.

A piezometer was placed near the location of the wastewater pump station. The ground water surface near the pump station location was measured to be at an elevation of 262.49 on 9/23/2019. The bottom excavation of the pump station wet well has been established at 262.49. The contractor shall prepare his/her bid proposal on the assumption that dewatering for the construction of the pump station wet well, 8-inch gravity sanitary sewer collection pipeline and 4- inch sanitary sewer force main will not be required.

Connecting the new 4- inch force main to the existing 8-inch force main along Sixth Avenue will require de-energizing the Hidden Beaches Pump Station for the length of time it requires to complete the connection. It shall be necessary for the contractor to remove the wastewater emanating from the 8-inch force main after it is severed in order to allow the 4- inch force main connection. The contractor shall transport and dispose of the wastewater at the City of Blythe Wastewater Treatment Plant. The contractor shall be responsible to coordinate all efforts with regard to de-energizing the Hidden Beaches Pump Station, removing and transporting the wastewater and coordinating the scheduling and delivery of the wastewater with the City of Blythe Wastewater Treatment Plant Staff.

I also understand that if the County determines that I have either (a) made a false certification herein, or (b) violated this certification by failing to carry out the requirements of section 8355, that the Contract awarded herein is subject to termination, suspension of payments, or both. I further understand that, should I violate the terms of the Drug-Free Workplace Act of 1990, I may be subject to debarment in accordance with the requirements of the aforementioned Act.
